

2 in 1 SOLAR POWERED LIGHT

HOW YOUR SOLAR POWERED LIGHT WORKS

- During the day, the solar panel converts sunlight into electricity and charges the battery.
- The battery stores the light energy for use at night.
- The number of hours the light stays on depends on your landscape location, weather conditions and seasonal sunlight variations.
- You can turn the light on or off by hand. Light from the sensor of the light can be switched "on" or "off" by hand.

CHOOSING A LOCATION

- Choose a location where the light can get direct sunlight for 6-8 hours a day.
- Avoid placing the light in a shaded area or near trees or buildings that may block the sunlight.
- The light should be placed in a location where it can be seen and provide the desired effect.
- Avoid placing the light in a location where it may be damaged by children or pets.

FIRST TIME USE

- Do not put water in the "ON" position.
- With the solar panel facing the sun, the light will turn on automatically.
- After the light has been used for a few days, the battery will be fully charged and the light will turn on automatically.
- To turn "ON" position, the light will automatically turn on at dusk and off at dawn.
- The light can be turned off at any time by hand.
- Switching the "ON/OFF" switch to "ON" will turn the light on.

TROUBLESHOOTING

- If the light does not turn on at dusk after 8 hours of charging.
- Make sure the light switch is in the "ON" position.
- Check the battery to make sure it is fully charged.
- Check the solar panel to make sure it is facing the sun.
- Check the light to make sure it is not blocked by any objects.
- Check the light to make sure it is not damaged.

OPTION 1
